

To Whom It May Concern:

Please do not stop XM radio from being able to broadcast freely. Technology is always changing and this is the latest in radio. Stopping them from broadcasting things like the weather and traffic is against the constitution. It's called Freedom of Speech! I understand why some censoring is necessary for pornography, but not for normal radio! When TV was invented, the radio people objected. When FM was invented, the AM people objected. This is the latest step. The only constant in the world is change! People thought that computers would take all are jobs, but they didn't! If you do this, what's next? Thank you for listening.
